

Assignment

This is a chance to put your newly acquired SQL skills to use. A fictitious organization gives you a project to do, and the following questions are to be answered to help stakeholders make decisions as part of future employment.

Qst 1

Number of remote workers in each department i.e. staff working outside their department location excluding shipping staff?

Qst 2

Create a manager information dimension table

Qst 3

Number of workers earning above the average salary in the organization

Qst 4

Create a new column in the employee table categorizing staff as either early hire or late based on the hire date i.e. if the hire date is greater or equal to the average hire date in the organization that should be late hire else early hire as this will assist in shares distribution.
